

Benny Aarup

Lead Product Design Consultant

Lead Product Designer / Product Execution Consultant (AI-Native) | Enterprise Systems, Product Architecture & Delivery

benny@aarup.me aarup.me linkedin.com/in/aarupme Copenhagen, Denmark

PROFILE

I am a lead product designer and AI-native product execution consultant specializing in enterprise systems, product architecture, and delivery. I turn complex requirements into structured, implementation-ready product solutions.

CORE CAPABILITIES

- | | |
|------------------------------------|-------------------------------|
| + Enterprise product design | + Product architecture |
| + Complex workflow design | + Design systems |
| + Implementation-ready prototyping | + Stakeholder alignment |
| + Figma systems and documentation | + AI-native product execution |

SELECTED EXPERIENCE

Toptal Lead Product Design Consultant	March 2015 - Present Distributed team
---	--

Working through Toptal's global consulting network, I deliver product design and product execution across complex enterprise environments. My latest engagement is with a confidential client in the shipping industry, contributing to a large-scale digital product environment supporting complex operational workflows. I work directly with product leadership and domain stakeholders to translate evolving business requirements into clear, executable product systems. This involves structuring product logic, defining user flows, resolving ambiguity, and establishing consistent foundations across interconnected product experiences. My role extends beyond interface design into product architecture and execution. I help shape how requirements are understood, validated, communicated, and translated into implementation-ready outcomes for product, design, and engineering teams.

- Enterprise product design and product architecture
- Complex workflow and interaction design

Azira Lead Product Design Consultant	October 2021 - October 2022 Los Angeles, CA
--	--

Delivered product design and system structuring for a large-scale operational intelligence platform providing place-based insights and human movement data to enterprise clients. The platform supported decision-making for more than 200 Fortune 500 companies, combining complex datasets, real-time processing, and advanced analytics. Focused on improving clarity, usability, and decision support across a highly data-intensive product environment.

- Defined product structure and navigation for interacting with large-scale datasets
- Translated analytical requirements into clear, usable product flows and interfaces

Caliber Lead Product Design Consultant	December 2019 - October 2021 New York City Metropolitan Area
--	---

Delivered product design and system structuring for a digital platform combining mobile and web applications for a data-driven fitness and coaching service. The platform required coordination across multiple product surfaces, including dashboards, user flows, and real-time interaction between users and coaches. Focused on structuring product experience and establishing scalable foundations across both mobile and web environments.

- Defined product structure and interaction flows across mobile and web applications
- Established component-based design system foundations to support consistency and scale

CONTINUED EXPERIENCE

BRIDGESTONE JAPAN

January 2019 - December 2019
Remote

Lead Product Design Consultant

Delivered product design and system structuring for an enterprise dashboard platform supporting data visualization and business intelligence across a global organization. The system served more than 140,000 users and was built on top of Power BI, requiring consistency, scalability, and clear interaction patterns across a high-volume user base. Focused on improving system structure, usability, and scalability across the dashboard environment.

Skanska

March 2018 - December 2018

Product Design Consultant

Worked on digital systems supporting large-scale construction and infrastructure projects. Focused on structuring document management and operational workflows within a complex, multi-stakeholder environment.
